A *stereoplay* loudspeaker-specialist introduces the TENSOR Beta

## TENSOR Beta Wins High End ‘Superspeaker’-Competition

The much renowned German trade magazin *stereoplay* came up with a rare experiment as a special feature for their 30. birthday: A comparative test of 5 “super-speakers” at which not the professional journalists but, for once, the visiting audience should form the jury. So, at the annual *High End* in Munich, considered by some “to be the definitive source of audiophiles inspiration“, the five combatants met the challenge. The five “super-speakers”, chosen by *stereoplay*’s editorial staff, were: KEF Reference 207/2, B&W N801D, Klipsch P39F, Cabasse Karissima, and ADAM Audio’s TENSOR Beta.

The Beta had been put to the internal *stereoplay* acid test just a few months earlier: “The **amazing neutrality** comes along with a drive and a spontaneity which to call ‘**sensational**’ would almost be an **understatement.**“

Now it was the *High End* audience to decide about the quality of the five speakers and nominate one winner. 700 visitors have put the speakers through their paces - with a clear result: Ahead by more percent versus the second than the second versus the last, ADAM Audio’s TENSOR Beta impressingly and repeatedly proved to be **the best amongst the best!**

### ‘Best Overall Performance’
